Hobar Tema?

G = R - orp, OG - kyc.-Magk.

Теорена (Интеграньная формула Грина)

| u(x) & C2(G)

 $=>\forall x\in G \quad u(x)=\int\limits_{G}\mathcal{E}_{n}(x-y)\Delta u(y)\,dy-\int\limits_{\partial G}\left(\mathcal{E}_{n}(x-y)\frac{\partial u}{\partial x}(y)-u(y)\frac{\partial}{\partial x}\mathcal{E}_{n}(x-y)\right)ds$

Cxema $\underline{aok-ba}$: $G_{\epsilon} := G \setminus B(x, \epsilon)$

Напом Обыгная ф. Грина:

 $\int_{C} \left(v(y) \Delta u(y) - u(y) \Delta v(y) \right) dy = \int_{C} \left(v(y) \frac{\partial u}{\partial y}(y) - u(y) \frac{\partial v}{\partial y}(y) \right) ds$

VAU - UAV = Y (dIVAU) - U (dIV VV) =

 $= \operatorname{div}(\nabla \nabla u) - (\nabla V, \nabla u) - \operatorname{div}(u \nabla V) + (\nabla V, \nabla u) =$

= div (VDu - UDV)

Наполи ф. Гаусса - Остроградского:

 $\int_{C} dv u dS = \int_{\partial C} \langle u, v \rangle ds$

T.o. $\int_{G} (v\Delta u - u\Delta v) dy = \int_{G} dv (v\Delta u - u\Delta v) dy =$

= J <vou-uov, >> ds

т с рисунка: Ут дие Gm вип. ф-ла Грина. (G_m) s

 $\int \left(v \frac{\partial u}{\partial v} - u \frac{\partial v}{\partial v}\right) ds = \int \left(v \frac{\partial u}{\partial v} - u \frac{\partial v}{\partial v}\right) ds = \int \left(v \frac{\partial u}{\partial v} - u \frac{\partial v}{\partial v}\right) dy$

Достаточно требовать $u,v \in C^2(G) \cap C^1(\overline{G}) : \Delta u, \Delta v \in C(\overline{G})$ $V(y) = \mathcal{E}_n(x-y)$ b G_2 $\int_{\partial G} \left(\mathcal{E}_{n}(x-y) \Delta u(y) - u(y) \Delta \mathcal{E}_{n}(x-y) \right) dy = \int_{\partial G_{\varepsilon}} \left(\mathcal{E}_{n}(x-y) \frac{\partial u}{\partial v^{2}}(y) - u(y) \frac{\partial}{\partial v^{2}} \mathcal{E}_{n}(x-y) \right) dx$ Рункция Грина (7) $\begin{cases} \Delta u = f(x), x \in G \\ u|_{\partial G} = \varphi(x') \end{cases}$ g(y,x), yEG, XEG - PYHKLLUS TPUHA zagazu Lupuxne (7)
6 oojacru G, ecun ① $g(y,x) = \hat{g}(y,x) - \mathcal{E}_{\kappa}(x-y)$, ge $\forall x \in G$, $f(x) = \mathcal{E}_{\kappa}(x-y)$ $\widehat{g}(y,x) \in C^{1}(\overline{G}), \Delta_{y}\widehat{q}(y,x) \equiv 0$ ② $\forall x \in G$, $f_{1} \times g|_{y \in \partial G} \equiv 0$ $\begin{cases} \Delta_{y} \hat{g} = 0, y \in G \\ \hat{g}(y, x) - \varepsilon_{n}(x - y) = 0, y \in \partial G \end{cases}$

② $\forall x \in G$, $f_{1}x \times g|_{y \in \partial G} \equiv 0$ $\begin{cases} \Delta_{y} \hat{g} = 0, y \in G \\ \hat{g}(y, x) - \mathcal{E}_{n}(x - y) = 0, \end{cases}$ Teopena $\begin{cases} f \in C(G), \quad y \in C(\partial G) \\ Q_{1}y_{1} - e_{1} \end{cases} \quad \text{with } e^{-C_{1}(G)} \end{cases}$ $\begin{cases} Q_{1}y_{1} - e_{1} \\ Q_{2}y_{2} - e_{1} \end{cases} \quad \text{with } e^{-C_{1}(G)} \end{cases}$ $\Rightarrow u(x) = -\int g(y, x) f(y) dy - \int \left(\frac{\partial}{\partial y} g(y, x) \psi(y)\right) ds$ $\Rightarrow u(x) = -\int g(y, x) f(y) dy - \int \left(\frac{\partial}{\partial y} g(y, x) \psi(y)\right) ds$ $\Rightarrow u(x) = -\int g(y, x) f(y) dy - \int \left(\frac{\partial}{\partial y} g(y, x) \psi(y)\right) ds$ $\Rightarrow u(y) = -\int g(y, x) f(y) dy - \int g(y, x) \psi(y) ds$ $\Rightarrow u(y) = -\int g(y, x) f(y) dy - \int g(y, x) \psi(y) ds$
